RADIATION THERAPY AND HIP REPLACEMENTS

Your orthopedic surgeon, Dr. DiMaio, has recommended that you receive a radiation treatment before your hip replacement surgery. This is to minimize the formation of new bone that otherwise could result in pain and impaired joint mobility..

The radiation treatment itself will occur on the day before your surgery. Prior to that, you must first meet with the radiation oncologist, Dr. Bosworth or one of his colleagues, for an initial consultation . They will meet with you to explain the radiation in more detail and answer any questions you may have.

Please call the number below as soon as possible to schedule your initial appointment.
